A first priority for DATA REUSE from end user perspective: Avoid multiple entries !

Healthdata's mission is to **facilitate the data exchange** between healthcare professionals and researchers according to the *principle of single multifunctional data collection* and the *re-use of data*, in order to **increase public health knowledge** and to **adjust health care policy**, with respect for the **privacy of the patient, the healthcare professional** and the medical confidentiality.

The challenge for scientific data collection

Which priority data sets ?

- *First need to better orchestrate existing « HDS » and links with sensitive new kind of datasets (e.g. genomics)*
- *Increasing Need to connect to external trusted sources linked to health determinants such as social factors, environment, food, personal behaviour,) and to IoT.*
- *A Personal cloud space for each citizen?*
